Available for contract and long-term remote engagements

SUMMARY

Shopify and full-stack engineer who owns the engineering behind a **₹5 crore (~US\$600K) monthly-GMV D2C business** — storefront, custom Shopify applications and the proprietary platforms behind them, every system designed and built from scratch and live in production. Hand-coded an **800-SKU Shopify storefront end to end in Liquid** with no purchased theme and no page builder, engineering a custom cart with qualified upsells and one-click checkout integration, and lifting **mobile Lighthouse performance from 60 to 90+**. **Eliminated US\$1,000+/month of third-party SaaS** by rebuilding the product reviews platform and the loyalty and rewards programme as native in-house Shopify applications — both live, both fully controlled by non-technical staff from the admin. Shipped a public reviews app and an advanced commercial theme, now under Shopify review for App Store and Theme Store listing. Beyond storefronts: an **AI platform orchestrating 30+ domain-tuned astrology agents** with an automated pipeline that computes and delivers 120+ page personalised reports within 24 hours; and a geolocation-driven courier allocation engine that **materially reduces return-to-origin loss**. Backed by three years of **SPFx / Microsoft 365 extensibility** delivery. Experienced working async with US, UK and EU teams.

CORE SKILLS

Shopify Liquid theme development from scratch · Online Store 2.0 (JSON templates, sections everywhere, app blocks) · Shopify Apps (public & custom) · GraphQL Admin API · Storefront API · Ajax Cart API · App Bridge · Polaris · Theme App Extensions · Billing API · Webhooks · Metaobjects & Metafields · Shopify CLI · App Store & Theme Store submission · GoKwik one-click checkout · Conversion & upsell engineering

Backend & Web Node.js · TypeScript · JavaScript (ES2023) · React · Python · GraphQL · REST · OAuth 2.0 · PostgreSQL · Prisma · PDF generation · CI/CD

AI & Data LLM orchestration & prompt engineering · multi-persona AI agent systems · automated long-form document generation · queue-backed async pipelines · scoring & ranking models · analytics modelling

Microsoft 365 SharePoint Framework (SPFx) · PnPjs · Microsoft Graph · Fluent UI React · Microsoft Teams tabs & personal apps · SharePoint Online · Power Platform · Azure fundamentals

Practice Core Web Vitals & Lighthouse optimisation · conversion-rate optimisation · WCAG 2.1 AA accessibility · Git · code review · technical documentation · async remote collaboration

EXPERIENCE

Lead Shopify & Full-Stack Engineer · Divine Hindu, Gurgaon / Remote

February 2024 – Present

- Own end-to-end engineering for a D2C business trading at **₹5 crore (~US\$600K) monthly GMV** — **approximately US\$7M annualised** — across an 800-SKU catalogue, covering storefront, custom applications, data platform and logistics tooling.
- Built **divinehindu.in end to end** — an 800-SKU Shopify storefront hand-coded in Liquid with no purchased theme and no page builder — raising **mobile Lighthouse performance from 60 to 90+** while adding a full page-transition and motion layer and a conversion-optimised product page template.
- Engineered a **custom cart with qualified upsells** on the Ajax Cart API, plus a Build Your Own Combo bundle builder with tiered discounting and three-tier ritual add-on upsells attached at cart and order level.
- Eliminated **US\$1,000+ per month (US\$12,000+ annually) of third-party SaaS** by architecting and shipping **two in-house Shopify applications** — a full product reviews platform and a loyalty and rewards programme, both live in production — replacing paid subscription apps outright, removing their injected storefront scripts, and putting every rule, tier and moderation control in the hands of non-technical staff through a purpose-built admin dashboard.
- Integrated **GoKwik one-click checkout** with COD verification across the full catalogue, and shipped shop-by-rashi and shop-by-deity merchandising taxonomies across 40+ collections with Vedic recommendation calculators.

- Built an **AI astrology engine** — a custom dashboard orchestrating **30+ AI astrologers**, each tuned to a distinct service — and an automated pipeline that takes birth-chart orders from the storefront, computes and generates a **120+ page personalised report**, and delivers it to the customer **within 24 hours**; 16 report products live from ₹299.
- Engineered a **geolocation-driven courier allocation engine** that scores every serviceable carrier on historical delivery success and RTO rate per pincode and assigns the best performer automatically at order creation — **materially reducing return-to-origin loss** across all shipments.

Freelance Shopify Developer · Cambik Digital, Remote

2023 – 2024

- Delivered **custom Shopify storefront and theme development for agency clients**, building in Liquid from scratch rather than customising purchased themes, and owning each build from specification through to production launch.
- [Add a specific client build here — what you built, the technology, and a measured result.]
- [Add a second specific — conversion lift, launch timeline, catalogue size, or performance gain.]

SELECTED PROJECTS

Divine Hindu — Custom Shopify storefront, built from scratch · www.divinehindu.in

800-SKU devotional commerce storefront trading at ₹5 crore (~US\$600K) monthly GMV, every line of Liquid hand-written. Custom cart with qualified upsells, Build Your Own Combo bundle builder with tiered discounts, in-house reviews app, in-house loyalty programme managed from the admin, GoKwik one-click checkout, Vedic recommendation calculators, shop-by-rashi and shop-by-deity taxonomies across 40+ collections, and a full page-transition system. Mobile Lighthouse performance 60 to 90+.

In-House Reviews & Loyalty Applications — Custom Shopify apps, live in production · www.divinehindu.in

Two native applications built to replace paid subscription apps outright, removing US\$1,000+ per month of SaaS spend and the third-party scripts that came with it. Full review capture, media and moderation workflow; points, tiers and redemption rules for the loyalty programme — every control surfaced to non-technical staff through a purpose-built admin.

AI Astrology Engine & Report Generator — Custom AI platform · www.divinehindu.in/pages/services

Admin dashboard controlling 30+ AI astrologers, each trained for a different astrology service, with full control over personas, routing and service configuration. Paired pipeline takes birth-chart orders from the storefront, computes and generates a 120+ page personalised report and delivers it to the customer automatically within 24 hours. 16 report products live, from ₹299.

Courier Allocation & RTO Engine — Geolocation-driven logistics routing platform · proprietary product

The storefront resolves the customer's coordinates to a pincode; the engine scores every serviceable carrier on historical delivery success and RTO rate for that specific area and assigns the best performer automatically at order creation. Materially reduced return-to-origin across all shipments.

Shopify Reviews App — Public app, submitted to the Shopify App Store and under review

Multi-merchant reviews platform: OAuth install, embedded Polaris admin, theme app extension storefront widgets, photo and video reviews, moderation queue, review-rich structured data, per-merchant data isolation and GDPR-mandatory webhooks.

Premium Shopify Theme — Submitted to the Shopify Theme Store and under review · demo: 8vsze4-uu.myshopify.com

Online Store 2.0 theme covering every major catalogue style, with a 3D product showcase, before/after comparison slider, shoppable lookbook hotspots, mega menu, quick view and quick add, testimonial carousel, feature comparison table, wishlist, size guide and dark-mode toggle. Sections everywhere, JSON templates, app blocks and merchant-editable theme settings throughout.

Pujaghar — Custom Shopify storefront, built from scratch · www.pujaghar.store

Combo builder with stacked volume discounts and real-time repricing, cart-value-gated flash-deal unlock, ritual blessing add-on upsell, lab-certificate traceability, curated benefit-led collections and WhatsApp support integration.

Shapify — Custom Shopify storefront, built from scratch · shapify.in

D2C apparel storefront with video-led product pages, BOGO and gift-with-purchase promotion logic, prepaid-order incentive pricing, free-shipping threshold progress, courier tracking integration and UGC and review carousels.
